

Harnessing AI to Transform Education: A Literature Review of Recent Publications

Enhancing Access, Engagement, and Innovation

Dr Joseph Vancell PhD (Hull, UK)
Senior Lecturer University of Malta

Dr Joseph Vancell

DISCLAIMER

I am no expert in AI.

My expertise lies in the use of technology, including AI, for enhancing teaching and learning.

I allow and ENCOURAGE the use of AI by students, at all levels of education (including primary, secondary, higher and adult education).

I do use AI in my own work. However, I am always conscious of its risks, use it prudently and ethically.

MOTIVATION

There's a growing corpus of literature about the use of AI in the classroom. The pace of publications is outstanding.

However, much of this writing is not backed up by theory, particularly constructivism. **AI experts even believe that they are expert pedagogists.**

This presentation will partly fill this gap.

Presentation Objectives

Explore the use of AI, and particularly **GenAI**, in education

Understand **constructivism** (Dewey) and its offshoot, **constructionism** (Papert)

Review **benefits** and **concerns** of AI

Recommend **best practices**

The background of the slide is a close-up, artistic photograph of a blue printed circuit board (PCB). It features intricate gold-colored circuit traces, various electronic components like capacitors and resistors, and a prominent white 'AI' logo on a central chip. The lighting is dramatic, with blue and orange highlights.

Conclusion &
Summary

Contents

Introduction

- The literature reviewed agrees that:
 - AIEd is **transforming** learning
 - GenAI will not replace teachers
 - It boosts **personalisation** by creating tailored experiences for students
 - **Constructivism** and **constructionism** as theoretical lenses
 - New tools for teachers
 - Real-time formative assessment
 - Ethical concerns remain

Constructivism & Constructionism

- Learners build knowledge
- Teachers act as facilitators
- Hands-on creation helps learning – creates a learning community
- Promotes student agency
- According to **John Dewey**

"Knowledge is a construction, not a copy. It is an outcome of interaction between the individual and the environment."

Traditional Education

- Dewey challenged the traditional educational model of his time, which treated children as **passive recipients of knowledge**.
- **Empty receptacles**, according to Paulo Freire, ready to be filled with knowledge.
- Pedagogy was mainly the assimilation of knowledge not its critical creation and engagement.

A photograph of three children building a sandcastle on a beach. A boy is in the foreground on the left, a girl is in the background in the center, and another girl is on the right. They are all smiling and focused on their work. The sandcastle is tall and has multiple towers. The background is a bright, hazy beach scene.

Constructivism & Constructionism

- In Seymour Papert's words:

Constructionism - the N word as opposed to the V word – shares constructivism's connotation of learning as "**building knowledge structures**" irrespective of the circumstances of the learning. It then adds the idea that this happens especially felicitously in a context where the learner is consciously engaged in constructing a public entity, whether it's a sandcastle on the beach or a theory of the universe.

Methodology

Literature
review:
publications
2020 – 2025

**Major
databases**
including
EBSCOhost,
Scopus, etc.
Used **Google
Scholar & HyDi**
(Hybrid
Discovery, UM)

82 sources
reviewed (out of
164 publications
which
mentioned AI in
education)
Published
between 2020
and early 2025

**Thematic Content
Analysis** (grounded in
the publications) using
open coding and
categorisation
(selective coding) as in
**constructivist GT
methodology** - aided
by Nvivo15 (Mac
version)

Keywords: **AI,
GenAI in
education**

GenAI in Education

Potential of GenAI

Custom paths
for students

Interactive
feedback

Supports
critical
thinking

Aligns with
inquiry
learning

Enhances
learner agency

Risks and Concerns

- Academic integrity issues
- Bias and misinformation
- Hallucinations in content
- Procrastination
- Dependence
- Over-reliance

Voices of Caution

- Naom Chomsky: **AI Undermines learning**
- **Plagiarism**
- Affects student outcomes
- **Limits critical engagement**

Noam Chomsky

- “I don’t think it [ChatGPT] has anything to do with education, except undermining it. ChatGPT is basically high-tech plagiarism...and a way of avoiding learning.”

Assessment worries and solutions

- Essays vulnerable to GenAI
- The risk increases in higher education where traditional assessments methods are still prevalent.
- Shift to formative methods
- Increase assessment practices that are inspired by constructivist and constructionist pedagogies, including group work
- Ensure authentic assessment

“AI presents a dual capacity: an immense potential to enhance learning experiences and pedagogical practices, alongside significant challenges that necessitate careful consideration and proactive strategies.”

Discussion

AI offers major pedagogic benefits

But requires a paradigm shift in thinking and pedagogy

Supports constructivism (and constructionism)

Frees teachers for deeper tasks

Educator's Evolving Role

From content deliverer to guide (facilitator)

Designer of learning experiences

Foster ethical tech use

Ongoing professional training

Ethical Considerations

Privacy and bias concerns

Need strong safeguards

Equitable access is key

Responsible integration

Key insights

There must be a move from away from the BANKING (Paulo Freire) model of traditional education where the passive consumption knowledge is prevalent.

The effective integration of AI in education is not merely a technological upgrade.

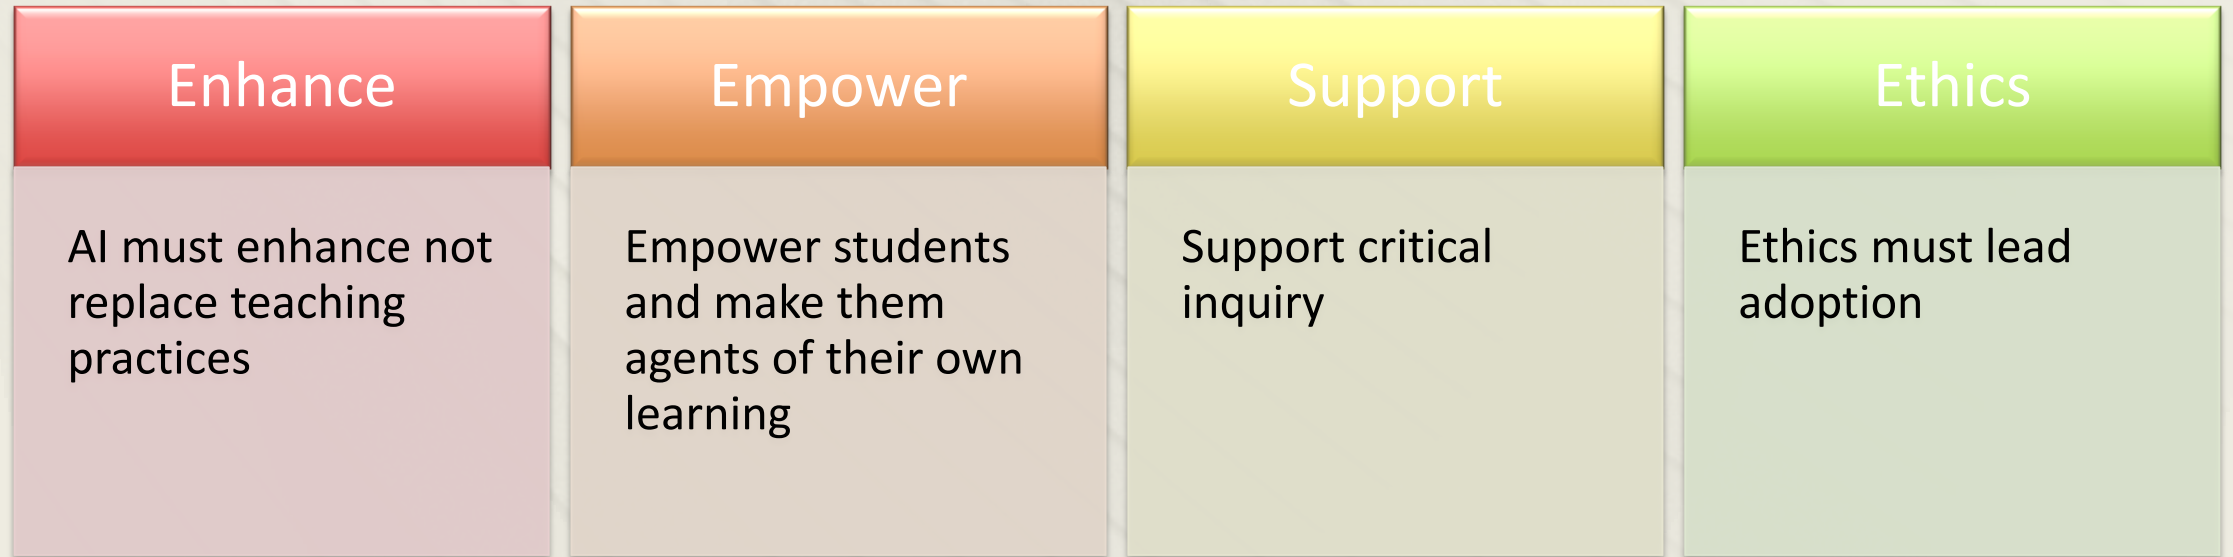

AI must be consciously used to enhance teaching and learning.

Assessment must change from summative to formative. It must be constructivist-aligned.

Although the profession is not at stake, the teacher must move beyond mere content delivery.

This necessitates comprehensive teacher training and ongoing professional development.

Conclusion

Summary

- AI transforms education
- Constructivist tools support learning
- Ethics, training, equity are essential
- AI helps the teacher to prepare students for a world in which AI is becoming more pervasive.

Thank You

Joseph Vancell
