Abstract

The Good Practice Guide is produced by the ITAAT (Information Technology to Adult Training) Grundtvig partnership. It consists of several articles prepared independently by the members of the ITAAT project. The aim of the guide is to introduce a series of Information Technology based learning interventions which have been of help in adult learning for the partners involved in the project. The topics covered are presented in a way as to help the reader to understand and try out the intervention in a straightforward and un-technical way. Many of the interventions are using one or more pieces of internet based software, for example "Glogster" or "Survey Monkey". While this software is demonstrated in order to achieve the desired results, we emphasise that we are not endorsing the particular software, and point out that there are many other similar pieces of software available which may be able to perform the same function. The guide is a simple instruction manual explaining how to use each tool, but also why we have chosen these particular tools, and how we have used and benefitted from them. The ITAAT good practice guide can be used to help to introduce some new ICT based interventions into your adult teaching and learning, and while the focus of the ITAAT partnership was ICT applied to adult training, many of the tools within this guide could equally well apply to younger learners.
