

Added Value Learning Innovation

Imelda Graham M.Phil
Dr. Alan Bruce

Pixel: The Future of Education June 2019

Co-funded by the
Erasmus+ Programme
of the European Union

Added Value Project: *Partners*

- School with Class Foundation (Poland)
- Universal Learning Systems (Ireland)
- Asociación Smilemundo (Spain)
- University of Applied Sciences (Holland)

Educational maths challenges based on the design thinking method

- Creating change in teaching Mathematics in Polish and European schools
- Overcoming the negative associations of mathematics as a 'difficult' subject
- Integrating mathematical competence into everyday life
- Instilling a sense of wonder and enthusiasm for the joy of learning in mathematics

Why?

- A general decline in standards of mathematical competence in almost all population groups
- Mathematics is still considered by many students as a “blackboard subject”, a subject aimed at abstract calculations with no link to reality
- Significant competitive pressures have been identified which detract from the general aim of creating what the Added Value project team described as “Sustainable Mathematical Competence and Numerical Literacy”.

Project Methodology: Develop a Toolkit based on the Design Thinking method

- A map of mathematical problems with a brief explanation of what they serve in practice.
- A set of ideas for practical activities, experiments and projects corresponding to the issues covered in the map
- Based on a playful approach to learn that ***“Maths is Everywhere”***
- Design thinking to develop problem-based learning skills

Design Thinking: A 5-Stage Process

Play and Learning Innovation

“Play in all its rich variety is one of the highest achievements of the human species, alongside language, culture and technology. Indeed, without play, none of these other achievements would be possible”

Benefits of Play

- Play is the original 'virtual reality' letting us explore, test, take risks
- Play helps us mediate the world
- Play lights up our brains
- Play supports novel neural connections
- Play changes the architectural structure of brain regions
- Adults become energised, motivated
- Increase divergent thinking to create new ideas

How will you introduce play into your
teaching and workplace

Playful Feedback

- Please write comments, feedback, questions on your A4 blank pages.....

.....Now fold the page into a paper aeroplane and fly it to us!

In conclusion:

Drawing on innovative, playful methodologies in education and training will enhance delivery of all content, effectively connecting in a deep manner and thereby maintaining the creative thinking of childhood into adulthood and lifelong learning
