

Origin of the Universe and Universal Sciences (OUUS)

Eisha Sandamali Yaman Sapuge

Sri Lanka

Abstract

Even though modern sciences have advanced to their optimum level today by dominating all fields, it has created critical world uncertainties in every field. This is because, it is based on unresolved fundamentals such as time, mass, light, speed of light, universe's origin, big-bang theory, space-time curve, and evolution theory. In consequence, physical, nonphysical, living, and spiritual paradigms exist in distinct fields with no relationships. We unveil unprecedented science education known as Origin of the Universe and Universal Sciences (OUUS), with well-defined fundamentals to solve the above crises. Starting from the universe's origin, we explain all sciences of creation, existence, and destruction of plants, beings, matter, galaxies, and consciousness. The universe originated from three elements light, mass, and time. Thereafter, the universe created a cube called Force Cube from which all other creations originated. The universe first established the theories or plans of all creations and following that, the consciousness and objects were created. The human brain comes from the universe's origin by carrying the methodology used to create everything mentioned above. When you study OUUS, the universe's infinite creative force, and energy connect directly with your brain and awakens hidden potentials. By transcending all existing sciences, we present these subjects under universal sciences to explain the universe's creations. The Gene Cells and Awakening Genes, The Science of Weight, Three Dimensional Light & Time, Time Traveling, Space Science, Space Journeys & Spiritual Transformation, Nuclear Science, The True Origin of Beings and Plants, The Science of Sound, Astral Body and Male-Female Characteristics, The Moon, Birth, and Human Flesh, The Science of Skin, Radiobiology, The Gemology, The Science of Eye, The Science of the Human Body Joints, Origin of Consciousness, The Science of Germination, Technology of Darkness and Enlightenment, Origin of Genes & Creating Teeth, Science of Human's Jaws, Origin of Lust, Mouth, Eye, Nerves, Brain, Heart & Lungs.

1. Introduction

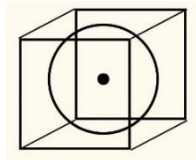

1.1 Framework of Scope

1.1.1 Universe's Origin

Unique Origin
light, mass, time →

Composed of the purest elements light, mass, and time that exist together as a single creation. They are identical and indistinguishable. Light exists as time, time exists as mass and mass exists as light. They have unique definitions that transcend existing sciences. No sun, moon, atmosphere, density, movement, mind ...etc

Force Cube or
Energy Cube →

The light, mass, and time arrange along the edges, creating a force cube that exists forever. This is the origin of the 3-D universe. It holds the whole universe forever and has boundless forces, wisdom, methodology, and energy to create and maintain the universe forever. The theories used to create the force cube are applied to all creations displayed under universal sciences and those creations exist as forces or wisdom. When we observe the universe's creations, we hardly see the shape of the force cube but we can see the methodology or theories. The nucleus is created at the center of the force cube and it is nonphysical. After the nucleus, the sphere surface is created and it is the origin of genes and sensitivity. OUUS contains the plans for all creations. The human brain comes from the origin hence, we all are connected to it. OUUS teachings awakens the hidden potentials of the human brain.

1.1.2 Universal Sciences

Plants

Male beings

Female beings

Society

The sun

The Moon

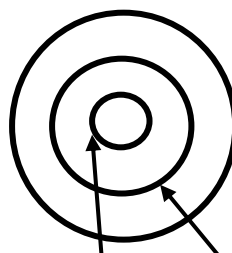

The world

Infinite immortal
planes

common features from the universe's origin to infinite immortal planes:

- Vacuum. The universal interconnected wisdom that exists without consciousness. No obstacles.
- No space, matter, or consciousness
- Nontraveling light, time doesn't elapse
- Permanent masses
- Immortality, everlasting happiness.
- Everything exists as universal wisdom. Creations are nonphysical.
- Non-growing plants and beings

Sahasree worlds →

Sahasree world
with 1×10^3 suns

Three Sahasree world with
 1×10^9 suns

Dvi Sahasree world with
 1×10^6 suns

- Consciousness, space, matter, no vacuum
- Revolving Earth around the sun
- Growing plants and beings
- Time elapses, light travels
- Transient masses, death
- Modern Sciences
- Worries, crises, obstacles

1.2 Significance and Goals

Scholars have not been able to define the ultimate truth of the universe, spirituality, the brain, the relationship between matter and consciousness, and the origin of plants, beings, and matter, even though they have been trying for decades. Also, those paradigms exist isolated as their unique origin is not defined. Nevertheless, worldwide educational systems keep teaching those, because nobody has replaced those with a strong verifiable new paradigm. Furthermore, mankind faces uncertainties in every field as well as in all age groups as education based on undefined fundamentals cannot produce optimum results.

Origin of the Universe and Universal Sciences (OUUS) is an unprecedented science education based on well-defined fundamentals that link all the above paradigms. Its content is not based on any existing paradigm rather, it transcends all existing sciences. We have chosen science education to achieve this because science allows the systematic exploration of any physical or nonphysical phenomenon for its validation.

Starting from the universe's origin, we explain all theories of creation, existence, and destruction of plants, beings, matter, galaxies, and consciousness and the liberation from the whole existence. The universe first established everlasting theories, methodology, or plans of all creations and following that, it created consciousness and objects. The universe's first creations are nonphysical and hence, exist as wisdom or forces.

The universe originated a boundless time ago and exists at an infinite distance away from us. The matter, sun, moon, or consciousness do not exist at the origin. The universe's origin is where the boundless forces and energy sources exist eternally to originate and maintain its creations forever. Even though the existence of sahasree worlds based on matter and consciousness vanishes from time to time, they will be recreated by eternal universal wisdom.

The human brain comes from the universe's origin by carrying the methodology and wisdom used to create the universe. When you study OUUS, the universe's infinite creative forces, wisdom, power, and energy connect directly with your brain.

Our findings present that the universe originated with just three elements light, mass, and time, and then they created the Force Cube from which the universal sciences originated. The force cube exists forever because it holds up the entire universe.

Our unique teaching techniques promote active engagement and self-discovery, allowing participants to realize their untapped capacities without relying on conventional instruments or practices. Universal Sciences education brings the universe's boundless creative energy to the earth to awaken the human brain and experience peace, harmony, and ultimate happiness for all human beings. Through our teachings, we guide individuals to unlock their infinite potential, fostering a connection with the universe that inspires positive change. OUUS is an unparalleled science education that unveils the supreme technology of every phenomenon in the universe because it starts from the origin of everything. Through OUUS, we introduce the cutting-edge technology to the world.

The content of OUUS is profound and broad hence, unable to present it all in this paper. The scope of the framework represents the universe's sequential order of creations from the origin. In this paper, we present only the Universe's Origin, Force Cube, and Creating Human Being's Teeth.

2. The Origin of the Universe

2.1 Unique Origin

The universe originated in a vacuum by light, mass, and time (Fig.1). The origination took place an infinite time ago and exists at a boundless distance away from us. The universe's origin is eternal. The light, mass, and time are identical and exist as forces at the origin. They have unique definitions that differ from scientific explanations.

Time: Time is a framework and it exists. It cannot make itself visible. Time doesn't elapse.

Light: Light represents the completeness or perfectness. The light completes time. Light doesn't travel.

Mass: Mass assembles or collects the light-time combinations in the universe.

Fig.1. Unique origin

2.2 The Force Cube

Then the light, mass, and time are arranged in three perpendicular planes as shown in Fig.2, and create the perpendicular origin. They switch to an independent existence. The universe creates many arrangements identical to the perpendicular origin. Then time and mass of one arrangement rotate anti-clockwise keeping the direction of light unchanged (Fig.3). The mass is called the opposite mass (o.m.) and time is called the opposite time (o.t.) after the rotation (Fig.4). The rotated arrangement is known as the opposite origin. Then the perpendicular origin joins with the opposite origin (Fig. 5) and creates the force cube (Fig.6 and Fig.7). These creations take place in a vacuum hence, no obstacles to restrict the creations. Therefore, the universe continues its creations once started.

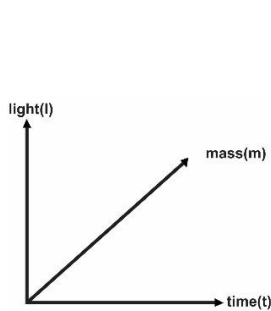

Fig.2. Perpendicular origin

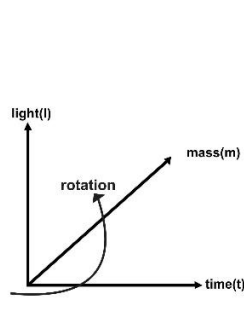

Fig.3. Perpendicular origin rotates

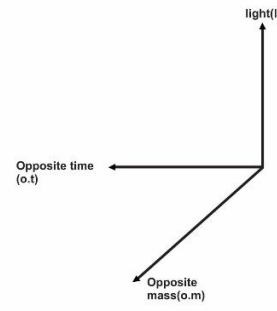

Fig.4. Opposite origin

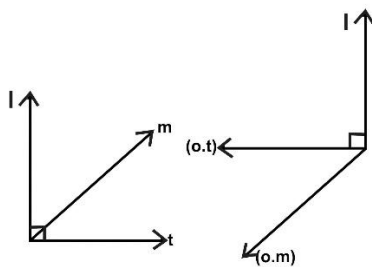

Fig.5. Joining the opposite origin with perpendicular

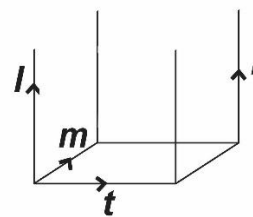

Fig.6. Creating the force cube

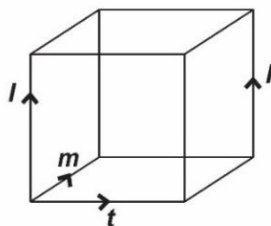

Fig.7. Force Cube

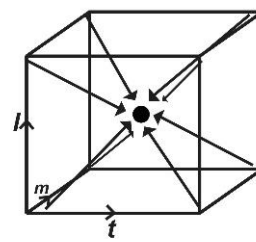

Fig.8. Nucleus attract vertices

The force cube is the origin of the 3-dimensional universe. The light, mass, and time act along the edges as shown in Fig.8. Then the nucleus is created in the middle of it (Fig.8). If there is a force cube in any creation of the universe, there must be a nucleus and if there is a nucleus, there must be a force cube. This nucleus is not made out of matter because matter has not been created yet. The force cube exists in the universe forever. There cannot be any superior power that can destroy the force cube because it holds the universe's infinite power, wisdom, and energy. We cannot see the force cubes in the world but we can see the theories used to create it. The perpendicular features, vertices, characteristics of the nucleus, directions, planes, and density are some of those theories.

The nucleus attracts light, mass, and time from eight vertices but they do not reach the nucleus. As a result, the vertices curve without distorting the perpendicular planes of the cube (Fig. 9). After that, the eight vertices attract the curves back (Fig.9). These sixteen forces create a rotating sphere surface by touching the midpoint of each plane of the force cube (Fig.10). The nucleus attracts outside light, mass and time but, they can reach only up to the sphere surface. They stick and spread over the rotating sphere surface making it extremely polished, shiny, smoother, and thinner. The continuous attraction of light, mass, and time increases the sphere surface's attracting power. Then the sphere also attracts light, mass, and time. Therefore, the sensitivity, impulsive forces, genes, stickiness, and libido originate from the sphere surface. The genes carry characteristics such as intelligence, height, skin color, smoothness, and roughness. Starting from the origin, the universe takes an infinite time to create the first sphere surface and it exists forever. After that, the universe creates many other force cubes and sphere surfaces faster from which the plants and beings are created. An individual can go to the universe's origin through extraordinary wisdom and his brain awakens too. The force cube created the universe hence, it holds infinite energy and wisdom as such, he also acquires its boundless energy and wisdom. Then he experiences genetic transformations such as the change in voice, nature of skin, and posture.

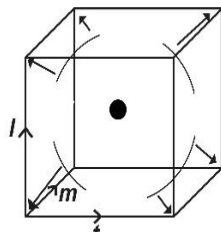

Fig.9. Curved vertices

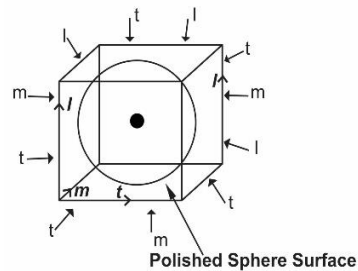

Fig.10. Sphere surface

Even though we explained the force cube in brief here, it can be analysed over a boundless time. This content is sufficient to awaken the brain if anyone tries to explore. The more you explore it more your brain awakens and the more you experience the boundless universal wisdom. The force cube is the infinite creator of the universe.

We now explain the teeth creation of human beings using the force cube and it demonstrates how the universe lays its plans to create nonphysical teeth.

3. Creating the Human Being's Teeth

We can explain the creation of the force cube by joining two right-angled prisms shown in Fig.11 & Fig.12. They join through the diagonals EG and AC as shown in Fig.13. Fig.11 and Fig.12 are identical but, Fig.12 rotates clockwise to join with Fig.11. The planes of the force cube have been labeled in Fig.13. The nucleus K (Fig.13) and sphere surface (Fig.14) are also created once the force cube was created. They also have the same characteristics discussed above. The rotated prism in Fig.12 gains opposite characteristics to the prism in Fig.11 due to the rotation. Thereafter, the polarity and magnetism originated (Fig. 13) in the universe and it is a very important force for the consequent creations.

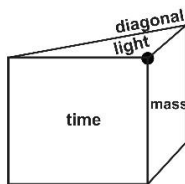

Fig.11. Prism

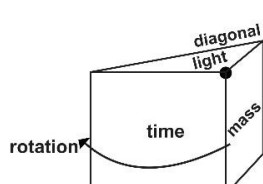

Fig.12. Prism rotates

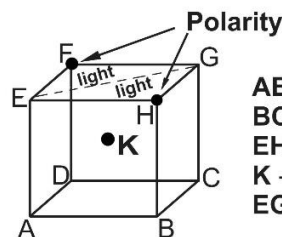

Fig.13.Force cube

K - nucleus
EG- diagonal

The polarity represents the male-female characteristics coming from the universe's origin. In other words, the male and female forces involve in originating the universe by making the infinite creator or the force cube. The male-female attraction comes from the universe's origin. At the universe's origin, the male and female exist as wisdom or forces.

The two hemisphere surfaces PQR and PSR sense each other and attract (Fig.14) due to the stickiness of the polished smooth surface. The ends Q and S want to catch each other. This also represents the male-female attraction due to the shiny sticky surface. Then they separate vertically through the diagonal EG shown in Fig.13 and create two new hemispheres (Fig.15). The central nucleus of the force cube K lies on XY (XY lies through K, along the plane EGCA in Fig.13) at the point where the hemispheres are in contact. The hemispheres again create two spheres due to the stickiness (Fig.16). This arrangement is the basic structure of teeth.

The first sphere is also created again as the nucleus continuously attracts light, mass, and time from the universe. Then it again creates the first two spheres with that nuclear energy, following the previous steps in Figures 14 and 15 by strengthening the teeth structure. This process continues forever.

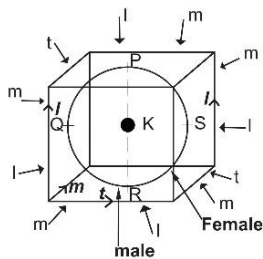

Fig.14. Force cube

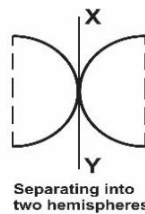

Fig.15. Sphere separation

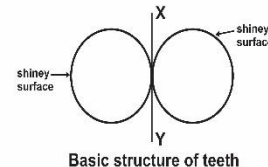

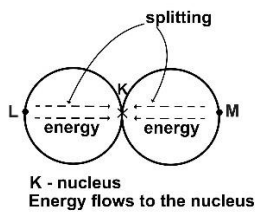

Fig.16. First two teeth

The end L attracts end M due to the polished characteristic (Fig.17). They cannot join because the first sphere continuously makes only two spheres. The energy at L and M increases as the first big sphere continuously supplies energy hence, the attraction forces increase. Therefore, the attraction forces between L and M acting towards the nucleus split the two spheres horizontally and make four new spheres (Fig.18). Then the energy accumulated at L and M flows to the nucleus. Here onwards, the nuclear energy of the central nucleus K creates the first large sphere, then the two spheres, and then the four spheres repeatedly. It is an everlasting process. The accumulated energy at L and M is continuously sent to the nucleus (Fig.18). Fig.18 shows the establishment of the first generation with forces of father, mother, son, and daughter. This four teeth structure exists as wisdom or forces and the matter fills into it when they go to sahasree worlds.

The ends L and M in Fig. 19 also try to join but they cannot because the four teeth structure is unbreakable. The four teeth structure becomes stronger as it continuously receives energy and this energy travels to K. Therefore, L and M exert a greater attraction force on the nucleus to reduce the energy traveling distances LK and MK. L and M want to bring the nucleus closer to them. Next, the four teeth (forces) split as shown in Fig.19 and Fig.20. A set of new nuclei is created at the intersection points between line LM and vertical lines in Fig.19. These nuclei bring the central nucleus closer by pulling the nuclear force towards L and M.

K - nucleus
Energy flows to the nucleus

Fig.17. Splitting the two teeth into four

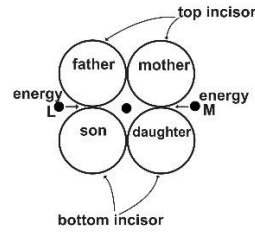

Fig.18. Creating four teeth

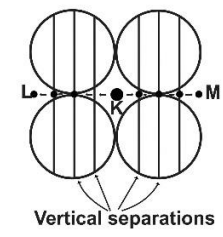

Fig.19. Splitting four teeth further

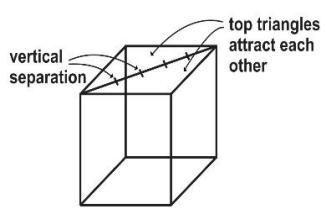

Fig.20. Splitting lines

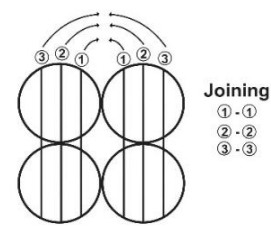

Fig.21. Joining the split spheres

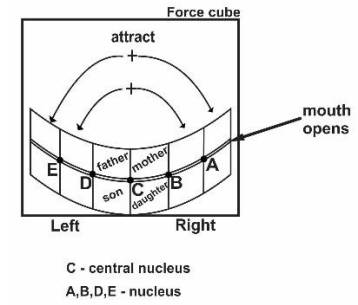

Fig.22. Curving due to polarity

The triangles EGH and EGF attract due to the polarity (Fig.13). Therefore, the split spheres try to join as shown in Fig.21 and as a result, they curve as shown in Fig. 22. The central nucleus is at point C and other nuclei are at A, B, D, and E.

The arrangement in Fig.22 is inside the force cube hence, the continuously creating first large sphere supplies its nuclear energy to A, B, D, and E. This energy flows through the opening between the top and bottom set of teeth shown in Fig.22. Then nuclear energy increases continuously and those nuclei curve and join to create the tongue inside the mouth (Fig.23). The tongue is horizontal and lies on the horizontal plane where the nuclei A, B, C, D, and E are drawn. Points A, B, C, D, and E are nuclei and have the characteristics of attracting things in the universe. Hence, they act as taste buds to attract the taste of foods. The main nucleus of the tongue is at the bottom of the nuclear line. Fig. 24 shows the completed mouth with the tongue and 32 teeth.

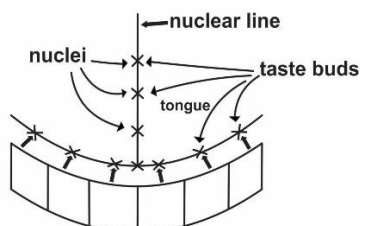

Fig.23. Creating the curved tongue

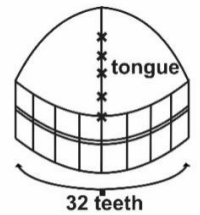

Fig.24. Creating the 32 teeth and tongue

3.1 Purpose of Creating the Mouth

The mesocarp of the fruit is the sphere and it is inside the force cube (Fig.25). The nucleus is in the middle of the sphere. The vertices of the force cube pull light, mass, and time to maintain the perpendicular angles between planes while the nucleus tries to pull them towards it. Therefore, they cannot reach the nucleus. The fruit's mesocarp or the gap between the nucleus and the sphere surface obstructs light, mass, and time from reaching the nucleus. The universe created the tongue to bring the mesocarp out because the nucleus wants to come out to get light, mass, and time. The

nuclei of the tongue can attract the taste. Now the universe has to establish a methodology to bring the tongue to the mesocarp.

It builds up a single creation by joining the 32 teeth and tongue via nerves. This is where the universe lays the foundation for egoism, which accumulates and aims to one goal. The basic foundation for the brain also originates here. Egoism, the sign of soul, nerves, mouth, and tongue build up a single creation; the brain aiming at the mesocarp. Furthermore, the universe senses a requirement of a mechanism for vision to see the fruit. For this purpose, the attracting feature of the tongue transforms into an eye by using the excess energy received from the first sphere of the force cube.

The tongue cannot go to the mesocarp as it is inside the mouth. Therefore, the polished characteristic of the tongue creates a cavity for the eye and the eye is connected to the brain. The brain identifies the mesocarp. In other words, the nuclear energy of the tongue creates the eye. The internal energy of the tongue is exposed to the outside in the form of an eye. The eye is an energy and it always aims at the outside world. It can grasp the outside world because it has the attracting power. The mouth can eat the mesocarp when the eye energy goes to the mesocarp. Then the mouth gains energy of light, mass, and time from the mesocarp, and the existence of beings starts.

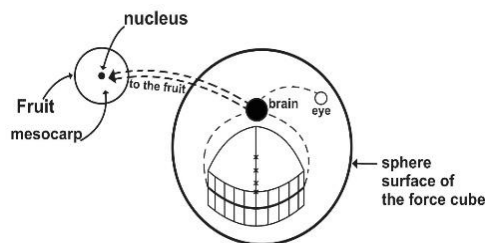

Fig.25. Creating the eye to eat the mesocarp

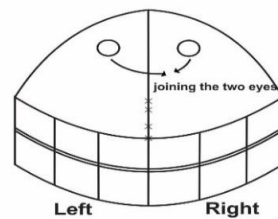

Fig.26. Creating the eye to eat the mesocarp

The theories or concepts of parental attraction to having children are now established in the universe (Fig.26). Beings are created according to these plans. The male being is the leader, so the universe first creates his existence. Father's eye is on the right side of our face (on the left side of Fig. 26) and it was created first. Mother's eye is created on the left side of our face. Father's and mother's eye energy combine to create the son and daughter. Combining the eye energy of parents is called the sex drive.

This energy is joined inside the mesocarp. The mesocarp is an outside creation. Hence, the sex drive connects parents externally. The energy of the sex drive originated aiming at the mesocarp. The combined energy of the eyes turns into a strong single eye known as the eye of sex drive. According to this universal wisdom, the conceiving takes place by the vision. The teeth and tongue combination acts as an eye to eat the mesocarp. In other words, the eyes fulfil the requirement of the mouth. The universe has established the wisdom to create a generation (Fig.27).

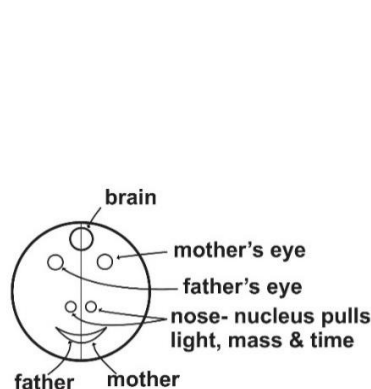

Fig.27. Universal theory of creating a generation

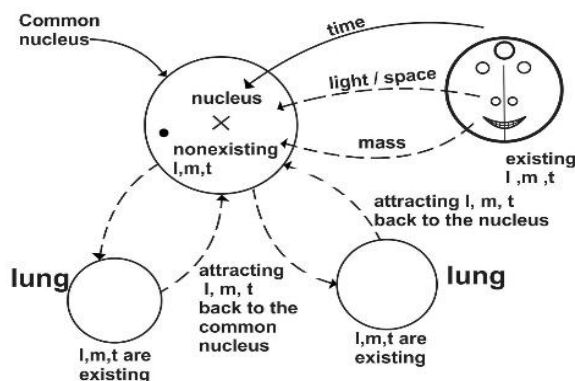

Fig.28. Creating the heart, and lungs and connecting them with brain, nose and mouth.

According to Fig. 27, the father's and mother's generation powers lie on the right and left sides of the face and create the mouth, nose, and eyes. The two holes of the nose attract light, mass, and time. The nuclei of the mouth also pull outside light, mass, and time. Father's and mother's eyes join outside and create the energy of the son and daughter. This energy goes out in search of food.

After that, the universe creates a common nucleus for the eyes, mouth, and nose (Fig. 28). This nucleus pulls the light, mass, and time attracted by the eyes, mouth, and nose. The common nucleus pulls the food from the mouth, time from the brain, and light or space from the nose. Then this nucleus experiences a larger force and its pressure has to be released. It is released to the lungs and light, mass, and time exist within them. The common nucleus pulls the existing light, mass, and time back to the lungs. The nucleus with existing light, mass, and time operates the heart and mind. Also, it sends energy to all body parts. This is the purest heart in the universe.

Now onwards, the universe has to create the first being including the theories of the four forces of father, mother, son, and daughter. The combination of these four forces is the basic building block or the gene. The universe creates the father first so that the mother, son, and daughter will also be created afterward. Father has the creating forces of mother, son, and daughter. The generations gain energy from the father. In consequence, future generations also gain energy from the father hence, the above fundamental features will be included in every being.

We presented the pure non-physical creations that lay the foundation for the physical creations. Non-physical creations do not cause worries whereas physical creations always create crises and uncertainties. This content is open for researchers to explore with high-level wisdom and connect with the boundless universal energy and wisdom.
