Abstract

Even if teachers use the Internet to initiate class is quite slow, web technology advances. If I was until recently operating as a base class Internet, PowerPoint, or Word, and the most advanced know to use email, messenger or forum, lo, these environments are already "obsolete". The first environment that I want to talk about and I made a lot of practice is Google. The popularity of social networking site Facebook grows significantly every day. Originally used as a social space, we can now find it more applications. My idea to use the learning space to me when I created my first Facebook account. First I want to use as a community of professional exchanges between teachers of French, but unfortunately I made a teacher of English because it is much better represented. Thinking they can learn a lot of contact with these groups around the world, I made a professional community of which are attached language teachers from all countries, and inspectors and trainers. Topics covered in the trade are mostly displayed in posts on ICT and Internet use in teaching resources. Moreover Facebook ICT is a tool allowing to use multiple web based applications and even a wide range of computer skills. In fact the aim is to accomplish the directions of Education and Training 2020 document in the field of

Training of trainers

The quality of education and training is closely linked to the quality of teachers and trainers who provide them, and the quality of their initial training and continuing professional development.

Training professional bloggers

Training of managers of social networking

Training of moderators facilitators of electronic communication

Common problems such as aging population, lack of skilled labor and global competition require joint action

The long-term strategic objectives of EU policies in education and training are:

Develop fundamental actions regarding:

- Education and training throughout life
- Mobility
- Active Citizenship
- Creativity and innovation,
- Entrepreneurship
