Abstract

The paper intend to present the project INMETT - Innovative Training Methodologies for Transport Trainers. It is a European Transfer of Innovation project approved on the frame of Leonardo da Vinci call 2009 (LLP), based on the training contents developed by "ELF -eLearning Facilitators: analysis of their different roles within different e-learning methodologies and approaches" (LdV Pilot project approved in 2005 n. I/05/B/F/PP-154178). The project is now in the middle. After updating the ELF outcomes to the specific training needs of the new target groups (trainers who work on Transport Sector, trainers in general, Transport training centers and Training centers) the partnership is developing a Virtual Learning Community. In this article we present and discuss the principles applied within the INMETT project. In order to illustrate the improvement of the project, we will present the analysis and assessment of data, methodology, tools used. We will present the results ready and we will ask the involvement of the all people interested to take an active part in the INMETT's Virtual Learning Community.
