Simona Butò is teacher in Mathematics and Natural Sciences.

She graduated in Biological Sciences from the University of Milan in 1991 and she was concerned in academic biochemical research up to 1998. She obtained teacher certification in 2001.

Simona Butò is involved in many projects centered on the application of web strategies to education processes. In particular her research activity focuses on: *a)* analysis of the different linguistic registers adopted by students in their texts; *b)* survey of the most common metaphors employed during scientific teaching activity, depending on the different ways of leading and managing classroom lessons.

Recently, she presented a successful 2-weeks exhibit during a national Science Festival, in order to prove that knowledge of science topics (*ie* the story of cosmology) is always realized according to the previous comprehension of a paradigm change in language.

She contributes to some italian reviews concerned in didactics and she has been invited as a speaker at conferences to present the experimental as well as narrative approach she applies in teaching about maths and science.
