Nowadays society is continuously trying to adapt to the new initiatives that constantly take place in the complex matter of education and new technologies relationship.

Starting from this idea, our paper "Education and New Technologies - Case Study on the Romanian Society" aims to present the new challenges that education is facing in the context of the new technologies. Our study starts with an introduction in which we express our main interests in this particular matter, continues with an explicit literature review on the topic of the role of new technologies in the education system, in general, puts a particular accent on the Romanian society and on the main aspects that can be improved in order to generate competitiveness at all levels. The conclusions of our research show that the subject of new technologies in education is clearly a big challenge for any society, in general, and, of course, for the Romanian society, in particular.
