Roberto Valli is the technical manager of the Computer Lab “Aula Didattica Taliercio” of the former Faculty of Engineering of the University of Padova.

In 1993 he took degree in Geological Sciences at the University of Padova and specialized in Applied Math and Computer Programming in 1995 with a thesis on a mathematical model applied in hydrogeology.

Since 1997 works as System and Network Administrator at the Faculty of Engineering of the University of Padova. His main interest is in open source operating systems and software, dealing primarily with GNU/Linux, network services and applications mainly used for learning purpose for engineer students.

In the last years he has been involved in testing new technologies for the inclusion of students with disabilities in a learning environment like a computer lab. Has been supervisor of some thesis works on open source accessibility solutions in cooperation with Department of Information Engineering of the University of Padova.

Since 2010 he took part at the project Le lingue Accessibili coordinating the technical part and giving his personal contribution to the development of an accessible prototype for testing English as a second language.
